

PASSIVE INCOME IN A CRYPTOCURRENCY WORLD

Does CryptoTab the free Bit coin mining machine really work?

CryptoTab download

If you are reading this page you are in search of ways of earning Bit coin by mining coins online, but fear falling into another scam, this CryptoTab review will help you resolve that issue.

Does CryptoTab the free Bit coin mining machine really work?

BY STEVEN JACKSON

If you are reading this page you are in search of ways of earning Bit coin by mining coins online, but fear falling into another scam, this CryptoTab review will help you resolve that issue.

To start with I am a CryptoTab affiliate and so I have the motivation to give a positive review of this platform. However, I also have been earning Bit coin and have received payments into my Binance account. For me that is the first thing I try, but to be frank I had spoken to other CryptoTab affiliates and was confident I would get paid. Nevertheless, as soon as it was possible to withdraw my earnings I did so.

I feel having the personal experience of seeing that transaction added to your account means something.

However, CryptoTab is not a get rich quick scheme, which simply means work is required like any business. Yes, it is 100% free but at the same time they offer cloud based mining services if you want to earn more. And an affiliate program that will leverage you a passive income better than most in the industry.

CryptoTab review

CryptoTab is unique in the world of Bit coin mining because it uses a browser to mine for coins. The process is very simple, the affiliate just downloads the browser software and installs it into their computer. Once the browser is installed, you must register with CryptoTab. At this point you can start mining Bit coin.

I know! This sounds very interesting, but is it legal?

To start with, yes, using a browser to mine Bit coin is completely legal and potentially a great way of earning a passive income online. However, the real question is if mining with a browser is worth the time and effort?

How I see it, I am working online all day, so I may as well earn a passive income while I am doing so. In addition, having an old PC optimized and set up currently does help to improve your earnings, but finally it is down to you and how you use the browser to your advantage.

What is CryptoTab and what does it offer to the crypto entrepreneur?

As mentioned, CryptoTab is a internet browser that mines Bit coin for you. Well, it doesn't actually mine Bit coin itself, it mines Monero (XMR) and then pays you in Bit coin. The reason why CryptoTab mines Monero (XMR) is because it is almost the only cryptocurrency that can be mined using a CPU.

So, to make it clear, when you are mining with a CryptoTab browser you are mining Monero (XMR), but when you are paid, CryptoTab pays in Bit coin.

What is a CPU?

For those of you who are unsure what a CPU is, it is the central processing unit used in your computer. So, the better your computer's CPU the more crypto you can make using a browser.

Can someone still use their computer while mining crypto?

Yes, you can even use your laptop or smartpone and still get over 1600 H/s. However if you intend adding their cloud based miners then you can earn substantially more. Click on the "Learn More" button on this for more details about cloud based mining.

On the whole, working while mining is possible. Alternatively, if you have an old PC with a decent CPU sitting doing nothing in your back room, there is an alternative solution that allows you to mine 24 / 7.
